#### ABSTRACT

PURPOSE: To easily prepare a business analysis chart and to reduce the burdens of a user by allocating more than one piece of information within a document name, a department name, processing contents and the department name for performing a processing next to each information unit for which one step of a flow is allocated to each processing of a document and performing management.

CONSTITUTION: This system is provided with an information unit file generation device 1, an information unit filing device 2, an information unit file correction device 3 and a business analysis flow chart display device 4. Then, when an information unit input form set beforehand is presented and the processing contents of business are inputted based on it, an information unit file to be the base of the business analysis flow chart is preserved based on the inputted contents on a system side. Thereafter, when the information unit file is corrected, a range influenced by correction is automatically judged and the information unit file is rewritten on the system side and also the business analysis flow chart is prepared based on the information unit file and displayed.
